**B3ZS (Bipolar with 3-Zero Substitution):** B3ZS is line coding technique used in the SONET STS-1 (Synchronous Transport Signal-Level 1) electrical signal which is then converted to an optical signal for transmissions over the SONET optical fiber.

**B8ZS (Bipolar 8 Zero Substitution):** B8ZS is a DS1 line coding technique that enables digitized voice and data transmission at the rate of 1.536 Mbps independent of the number of consecutive zeros and pulse density requirements that are normally imposed on the T1 transmission line.

**Bandwidth:** The total frequency band, in Hertz, allocated for a Channel.

**Base Rate:** The monthly recurring charge for Data Services without discounts.

**BER:** Bit error ratio. The percentage of received bits in error compared to the total number of bits received, expressed as a number the power of 10.

**Circuit Switched Data: (CSD)** Provides the ability to process calls whether they are voice or data over the public switched telephone network. The network must recognize how to appropriately handle each call, voice or data. ISDN coupled with CSD can provide videoconferencing and broadband data communications by Bonding B-Channels together. CSD data calls are measured in the same manner as voice calls, in units of minutes of use and B-Channel equivalents.
